

# CHOOSING TRACER WIRE

## WHY COPPER-CLAD STEEL (CCS)?

It's stronger than solid copper, AND conductive. It's more price stable, corrosion resistant, and less likely to break when it's put through the rigors of underground construction.

## WHY COPPERHEAD® CCS?

Copperhead tracer wire has gone through the rigorous testing and quality checks that only 100+ years of cladding experience can offer.

## WHAT CCS IS RIGHT FOR THE JOB?

What installation application will be used?
